

THE BRONTË CLINIC

A HOLISTIC APPROACH TO SKIN HEALTH

Founded by Dr Fiona McCarthy, The Brontë Clinic offers a comprehensive range of advanced aesthetic and dermatological services designed to support long-term skin health and natural-looking results. With clinics in Mayfair and Guildford, Surrey, The Brontë Clinic provides patients with clinical rigour and results that make them look like a rested and refined version of themselves. The Brontë Clinic believes that every face, skin type and stage of life require an individual assessment grounded in medical expertise and delivered with clinical excellence, kindness and compassion.

Dr Fiona McCarthy, a Consultant Medical Oncologist with over 20 years of experience, has brought together a team of highly qualified doctors, dermatologist and advanced practitioners who deliver comprehensive, medically grounded care across a wide variety of concerns, including:

- **Regenerative Aesthetics:** Including JULAINE, Polynucleotides, PRP and collagen-stimulating treatments such as Prohilo Structura, designed to improve skin quality and support natural tissue repair.
- **Traditional Aesthetic Treatments:** Anti-wrinkle injections and dermal fillers, delivered with a conservative philosophy to achieve subtle, natural-looking rejuvenation.
- **Advanced Skin Technologies:** Non-surgical treatments such as Morpheus8, BBL and medical microneedling, targeting concerns including pigmentation, acne, redness, and skin texture.
- **Skin Hydration and Boosting Treatments:** Injectable skin boosters and hydration therapies such as Prohilo enhance skin radiance, elasticity, and overall health.

In addition, the clinic treats a range of dermatological concerns under Dr Alpa Kanji, a Consultant Dermatologist with expertise in treating eczema, psoriasis, acne, vitiligo, pigmentation disorders and hair loss. She also provides skin cancer screening, mole checks and performs minor skin surgery.

"What sets us apart is our commitment to clinical integrity," says Dr McCarthy. "We provide honest, medically informed advice—even when that means advising against treatment. Our priority is always what is safe, appropriate, and genuinely beneficial for the patient."
